

The Future of Social Robots That Work with People

The Nyokkey autonomous, mobile-type social robot with arms

Nyokkey contributes to automation and manpower saving of various tasks in the same space as people.

Capabilities of Nyokkey

- It is capable of autonomous driving by recognizing the surrounding conditions and adapting to environmental changes
- Loading materials into an equipment collaborate with other devices and robots
- Detailed measurement by approaching an object with sensors in the arm
- Switching between autonomous and remote control is possible
- By incorporating generative AI, it is possible to have conversations with people.
- Communication with people through gestures
