

Aiming for a Society Where People and Robots Live Together

Kawasaki Heavy Industries has developed a variety of social robots to realize a society where people and robots coexist. Here is an introduction to a future in which robots are active in our society in situations such as the RHP Kaleido assisting at disaster sites, and RHP Friends helping with nursing care.

Demonstration

Supply transport at a disaster site's evacuation shelter

RHP Kaleido

RHP Friends

Presented by the CNRS-AIST Joint Robotics Laboratory (JRL)

Demonstration

Use in the nursing care field

With the cooperation of Fuji Corporation

What is the CNRS-AIST JRL?

The CNRS-AIST JRL is a joint laboratory established between the French public organization CNRS (Centre National de la Recherche Scientifique) and AIST. It aims to improve labor productivity and quality of life using robots, advancing research on basic technology to enhance robot autonomy and practical research on real-world problems through close collaboration between researchers from both countries.
