

Overcoming Regional Differences in Healthcare

Robotic Assisted Surgery System

Consolidating Kawasaki's cutting-edge robot technologies

The Operation Unit performs the surgery.

The Surgeon Cockpit is operated by the surgeon.

hinotori™ surgical robot system was developed to realize patient-friendly, minimally invasive surgery. It has already been implemented in a large number of surgeries at over 30 medical institutions.

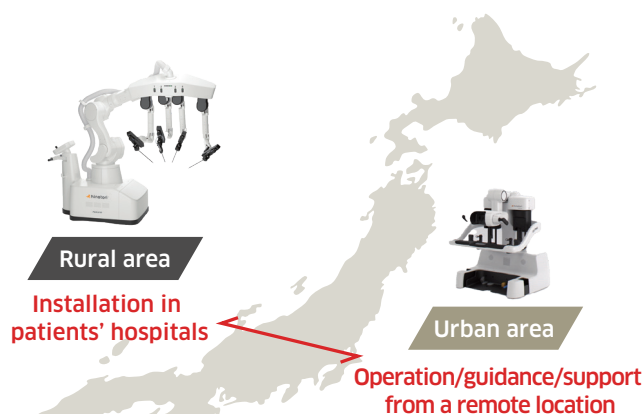

Efforts to realize remote surgery

The previous reality

Growing differences in healthcare in urban vs. rural areas

Future endeavors

Aiming to realize surgical guidance/support from a remote location to make advanced surgical care available anywhere in Japan,

Connection via communication lines

Implementing development/demonstrations with communication carriers and medical institutions
